Diesel locomotive M44 MÁV

**Power meets versatility –
The MÁV M44 diesel locomotive in 1:87 scale**

Diesel locomotive M44 MÁV III

Photo: Dr. Kubinszky Mihály

The legendary M44 series shunting diesel locomotives are synonymous with robust performance, high reliability and versatility in shunting and light freight transport. Since the late 1950s, these diesel locomotives have not only shaped operations in Hungary, but have also found their way – in exported versions – to ČSD, Poland and the states of the former Soviet Union.

Equipped with the powerful Ganz-Jendrassik XVI 170/240 V16 diesel engine and a top speed of 80 km/h, the M44 combines economy, durability and flexibility. Its striking design, with a driver's cab at the end of the vehicle and practical gangways for shunting personnel, makes it an unmistakable classic in European railway history.

In addition to the locomotives of the Hungarian State Railways (MÁV), numerous examples found their way to industrial and works railways, where the M44 quickly became a favourite thanks to its powerful traction and robust construction.

In addition to the Hungarian State Railways (MÁV), numerous examples found their way to industrial and works railways, where the M44 quickly became a familiar and valued piece of equipment thanks to its powerful traction and robust construction.

The simple basic design facilitated maintenance and servicing for both the state railways and industrial operators and contributed significantly to the long service life of the M44.

Our model: M44.071 MÁV, condition as of 1963

PIKO Diesel locomotive M44 MÁV III

The PIKO model of the compact shunting locomotive is every bit as good as its prototype and, in addition to its detailed design, also impresses with numerous functions that perfectly round off the model railway experience.
